

Laboratorio 3

EJERCICIOS PROPUESTOS

Construir y describir formalmente un autómata finito determinista (DFA) para cada uno de los siguientes lenguajes:

- 1) [6pts] $L_1 = \{ w \mid w \text{ es una cadena binaria que contiene la subcadena } 10 \}$

Se tiene $M = (S; \Sigma; \delta; i; F)$

$S = \{S0, S1, S2\}$ $\Sigma = \{0, 1\}$ $F = \{S2\}$

Ademas : $\delta(S0, 0) = S0$

$\delta(S0, 1) = S1$

$\delta(S1, 1) = S1$

$\delta(S1, 0) = S2$

$\delta(S2, 1) = S2$ $\delta(S2, 0) = S2$

2) [6pts] $L_2 = \{ w \mid w \text{ es una cadena binaria que contiene un número par de unos (1's)} \}$

Se tiene $M = (S; \Sigma; \delta; i; F)$

$S = \{S0, S1, S2, S3\}$ $\Sigma = \{0, 1\}$ $F = \{S2\}$

Ademas : $\delta(S0, 0) = S0$

$\delta(S0, 1) = S1$ $\delta(S1, 0) = S1$

$\delta(S1, 1) = S2$ $\delta(S2, 0) = S2$

$\delta(S2, 1) = S3$ $\delta(S3, 0) = S3$

$\delta(S3, 1) = S2$

3) [8pts] $L_3 = \{ u \mid u \in \{a, b\}^* \text{ y } u \text{ contiene tres } b \text{ consecutivas} \}$

Se tiene $M = (S; \Sigma; \delta; i; F)$

$S = \{S0, S1, S2, S3, S4, S5, S6, S7\}$ $\Sigma = \{a, b\}$ $F = \{S3, S4, S5\}$

Ademas : $\delta(S0, a) = S0$ $\delta(S0, b) = S1$ $\delta(S1, a) = S1$

$\delta(S1, b) = S2$ $\delta(S2, a) = S2$ $\delta(S2, b) = S3$

$\delta(S3, a) = S3$ $\delta(S3, b) = S4$ $\delta(S4, b) = S6$

$\delta(S6, a) = S6$ $\delta(S6, b) = S6$ $\delta(S4, a) = S5$

$\delta(S5, a) = S7$ $\delta(S5, b) = S7$ $\delta(S7, a) = S7$

$\delta(S7, b) = S5$
